

METHOD AND SYSTEM FOR DOWNLOADING DATA TO PORTABLE ELECTRONIC DEVICE

ABSTRACT OF THE DISCLOSURE

5 A method and a system for downloading data to a portable electronic device are proposed, which enable a terminal user to login a service management center through wired network connection established by e.g. a computer device, or through wireless communication by using e.g. a WAP cellular phone. This allows the terminal user to manage personal book data and browse introduction information of books, as
10 well as to download required books in a charge manner. Moreover, such a downloading mechanism makes the terminal user to be able to freely download required data, and obtain latest information of newly published books as accompanied in the downloading process; this indirectly reduces costs in advertisement of the new books. Therefore, the foregoing downloading method and system are advantageous of
15 allowing a user to read desired data at any time, and also providing commercial benefits as to save costs for printing, storing, selling and advertising conventional paper-made books.
